

Part 5 – Business Recommendations

Provide at least five actionable recommendations.

Launch a Month-to-Month Conversion Campaign

- Action: Target month-to-month subscribers with personalized incentives (such as a discounted rate for the first three months or exclusive perks) to encourage them to upgrade to 1-year or 2-year contracts.
- Impact: Secures long-term revenue streams and drastically reduces the 42.7% churn rate associated with flexible monthly terms.

Implement an Early-Lifecycle Onboarding Program

- Action: Focus proactive customer success touchpoints and support check-ins heavily within the first 12 to 18 months of a customer's tenure, since churn heavily concentrates in this early window.
- Impact: Builds early brand loyalty, ensures proper service setup, and addresses friction points before customers decide to cancel.

Revise Fiber Optic Value and Support Strategy

- Action: Conduct an audit of the fiber optic tier to evaluate whether pricing, speed expectations, or technical reliability are driving the 41.9% churn rate. Bundle value-added services like free security packages or device protection to enhance perceived value.
- Impact: Protects high-value customers from migrating to competitors due to cost-to-performance dissatisfaction.

Incentivize Automated Payment Migration

- Action: Introduce minor financial incentives or billing credits for customers who transition away from manual payment methods (such as electronic checks) and set up automatic bank transfers or credit card payments.
- Impact: Mitigates the high churn rate tied to manual billing friction and improves monthly cash flow predictability.

Deploy a Predictive Churn Early Warning System

- Action: Build a machine learning model leveraging indicators like high monthly charges, short tenure, and month-to-month contract status to flag at-risk accounts automatically.
- Impact: Enables the retention team to intervene proactively with targeted retention offers or specialized support before the customer initiates cancellation.
